Why Innerglass Windows?

Thank you for your interest in Innerglass Window Systems, LLC, makers of The Perfect Storm! Our custom-made windows are the most affordable, convenient and energy efficient way to upgrade your existing windows. The Innerglass window is not a replacement window, nor is it a traditional storm window. Instead, it brings together the benefits of both while eliminating the difficulties each of these options can present. Innerglass windows are significantly more effective at insulating your home and lowering your heating and cooling bills than a traditional outside storm window, without the expense of installing replacement windows.

The Innerglass window is a vinyl-framed, glass interior window that mounts on the inside of your primary window using our Compression-Fit technology. It seals tightly, eliminating drafts, condensation and outside noise. The Compression-Fit Advantage eliminates the need to install a track for the window to sit in, thus providing an airtight fit, even for windows that are not perfectly square. Innerglass windows are so quick and easy to install, most people do it themselves. They also come with options like Low E glazing, tempered glass, laminated or Plexiglass to further improve their efficiency.

Because there is no carpentry required to install Innerglass windows, you avoid all of the headaches associated with installing replacement or traditional storm windows. Not only that, our windows do not disturb the integrity of your existing windows, so they are perfect for historic renovation, condominiums and commercial applications. Our windows are available in three colors and fit so well with your existing windows, they are virtually invisible, especially from the outside.

Innerglass Windows pass all the tests!

Our windows were tested for air infiltration by the Vermont Energy Investment Corporation for the This Old House television show. At wind speeds of 25 mph, our windows performed 7X better than the industry standard!

Innerglass windows were also tested by Intertek Testing Services for their noise reduction capabilities. Our windows performed so well that we earned a qualification which allowed us to supply windows to homes and business around the construction sites during the Boston Central Artery Project. The noise reduction was so dramatic that even after our windows were hermetically sealed and tested again, those results were only a fraction better that when they were tested without being sealed. Now that’s The Compression-Fit Advantage!

What a difference the windows have made! The soundproofing is amazing. We now have to look outside to tell if the wind is blowing. - Arthur Z.

Compression-Fit makes it Easy to Install
Installing Innerglass windows is literally as easy as 1-2-3!

1) Cut the header channel to fit the inside of the top of your window frame and secure the channel in place.

2) Squeeze the compression sides in to insert the top of the window into the header channel, then continue pressing the sides in from top to bottom as you push it in place.

3) Drill a 3/32” hole on each side, in front of the window about 1/3 of the way up from the sill and insert the blocking pins.

Projects Completed

This Old House – Salem • US Military Academy at West Point • Boston Central Artery Project
Olana Mansion • Grand Portage National Monument • Coe Hall Museum • Rutgers University

Wirth County Courthouse • Fort Laramie National Historic Site • Antietam National Battlefield
Hilltown Historical Society • Bixby Library & Museum • S. Windsor Historical Society

We had all 21 windows done before supper, I couldn’t be happier. - Marilyn C.
Preserve the history. Keep the original windows.

*Innerglass* windows are “The Perfect Storm” for insulating historic homes and buildings. The standards that define a “historic” home or building are very specific. The original window units are part of the building’s historic integrity and replacement of these windows is strongly discouraged. The guidelines specifically say, “If the original windows are in place, repair and retrofit of these windows is preferred.” That’s where *Innerglass* comes in. Because our windows compression-fit inside of the stops of the primary window, there is no need to disturb the integrity of the original windows. And because each of our windows are custom made to fit the exact measurements of each window, they are extremely efficient for windows that are no longer square, which is very often the case in historic homes and buildings.

*Innerglass* windows are also a great way to insulate condominium windows, which can often be significantly less efficient than a window you would find in a house.

Your windows are everything we hoped they would be. They are attractive and fit very well with the architecture.

- Chuck P.

The Fort McHenry Project

Compression-fits to any window, no matter how crooked!

Innerglass gives you options

Innerglass Windows Systems, LLC also produces Double-Hung and Slider windows that fit inside of your existing window. We are also proud to offer interior compression-fit screens and full opening exterior screens for your existing windows. For more information on our various window and screen options, please call us at (800) 743-6207.

All Innerglass windows are available with hard coat pyrolytic Low-E glass. This advanced technology further enhances energy conservation and efficiency by allowing visible light through but acting like a heat mirror, doubling the R-value by reflecting the room heat and your body heat back inside in the winter, and reflecting the sun’s heat out in the summer. Low E glass also blocks most of the UV light and solar heat that can damage furniture and carpeting.

I am a woman with no carpentry experience and I completed the measuring and installation myself. It was a breeze.
- Jean K.
**Innerglass Interior Storm Windows:**
- Maintain the charm & beauty of your existing windows
- Significantly reduce heating & cooling bills
- Compression-Fit to eliminate drafts completely
- Greatly reduce outside noise
- Are perfect for enclosing screen porches
- Save energy, save money & save history!
